

Trinity Desktop Environment

The Trinity Desktop Environment (TDE) project is a feature rich desktop environment for Unix-like operating systems with a primary goal of retaining a traditional, efficient and productive user interface. TDE was born as a fork of the K Desktop Environment version 3.5, which was originally written by the KDE Team, a world-wide network of software engineers committed to Free Software development. The name Trinity was chosen because the word means Three as in continuation of KDE 3. Since then, TDE has evolved to be an independent and standalone desktop environment project.

The TDE project was founded by and is still led by Timothy Pearson. Timothy is an experienced and skilled software developer and was the KDE \geq 3.5.11 support coordinator/developer for previous Kubuntu releases. Over time, continued development has polished off many rough edges that were present in the final release of KDE 3.5.10 and many new and useful features have been added to keep the environment up-to-date. The current stable release of TDE is R14.0.3, which brings along several major improvements over v3.5.13.2.

One of most notable features of R14 is implementation of the Trinity Desktop Hardware Library (tdehwlib) that did away with dependency on HAL. With the HAL dependency removed, R14's foundation now rests solidly on current and maintained libraries and dependencies. For systems still based on HAL (such as *bsd), HAL support is still available as a building option.

The TDE development team is small but friendly. Anyone wanting to join the development process and help create the next TDE release is welcome! If you wish to participate, please take a look at the Get involved page.

Install

Saya menggunakan tiOS yang berbasis Ubuntu 14.04. Edit `/etc/apt/sources.list` dan tambahkan¹⁾ :

```
deb http://mirror.ppa.trinitydesktop.org/trinity/trinity-r14.0.0/ubuntu
trusty main
deb-src http://mirror.ppa.trinitydesktop.org/trinity/trinity-r14.0.0/ubuntu
trusty main
deb
http://mirror.ppa.trinitydesktop.org/trinity/trinity-builddeps-r14.0.0/ubunt
u trusty main
deb-src
http://mirror.ppa.trinitydesktop.org/trinity/trinity-builddeps-r14.0.0/ubunt
u trusty main
```

di akhir baris. Lalu daftarkan kunci PGP dengan perintah berikut :

```
sudo apt-key adv --keyserver keyserver.quickbuild.pearsoncomputing.net --
recv-keys F5CFC95C
```

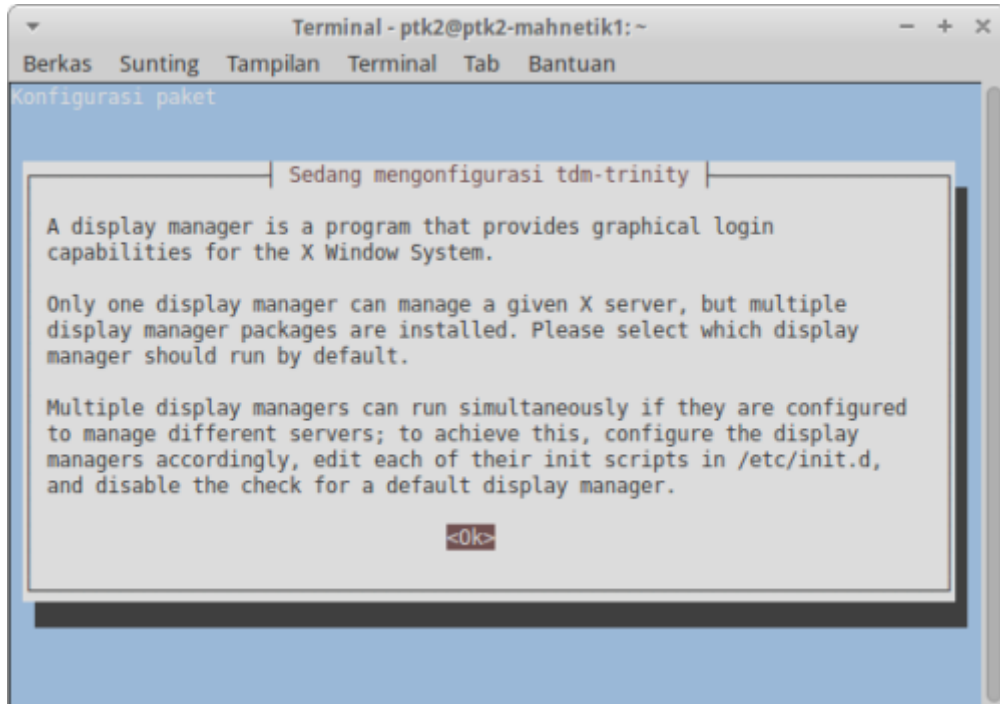

Update daftar paket dan install Trinity :

```
sudo apt-get update
sudo apt-get install kubuntu-default-settings-trinity kubuntu-desktop-trinity
```

Tunggu sampai selesai.

Konfigurasi Awal

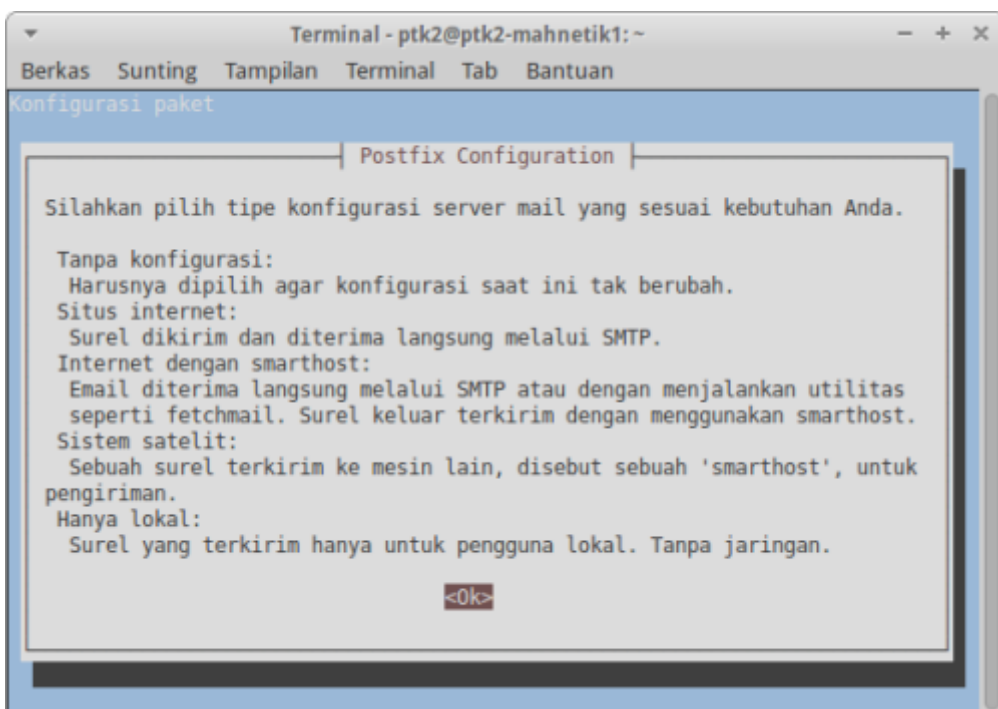

Jika muncul jendela seperti ini:

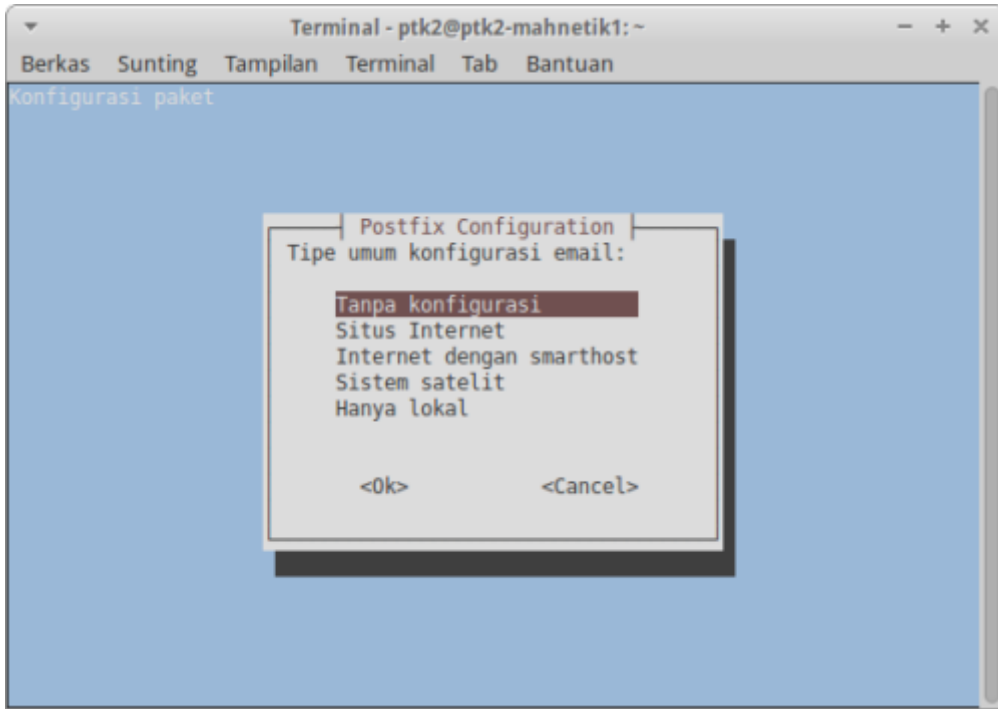

Tab > Ok.

Terserah pilih mana, ini adalah display manager default yang akan digunakan.

Tab > Ok.

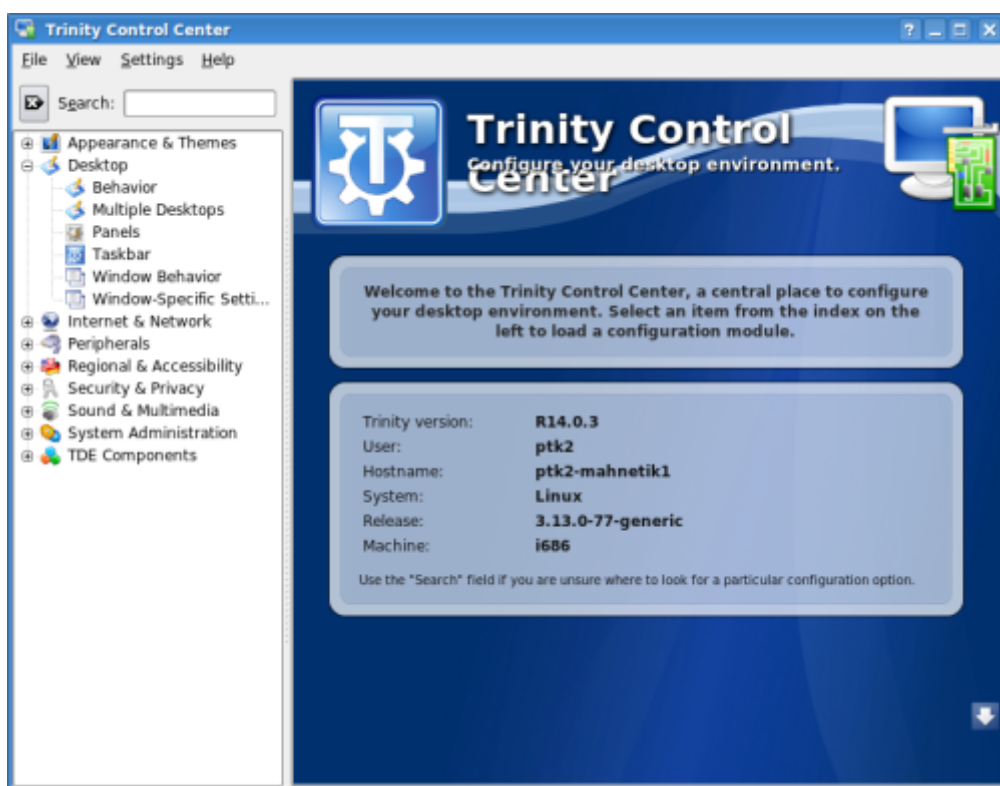

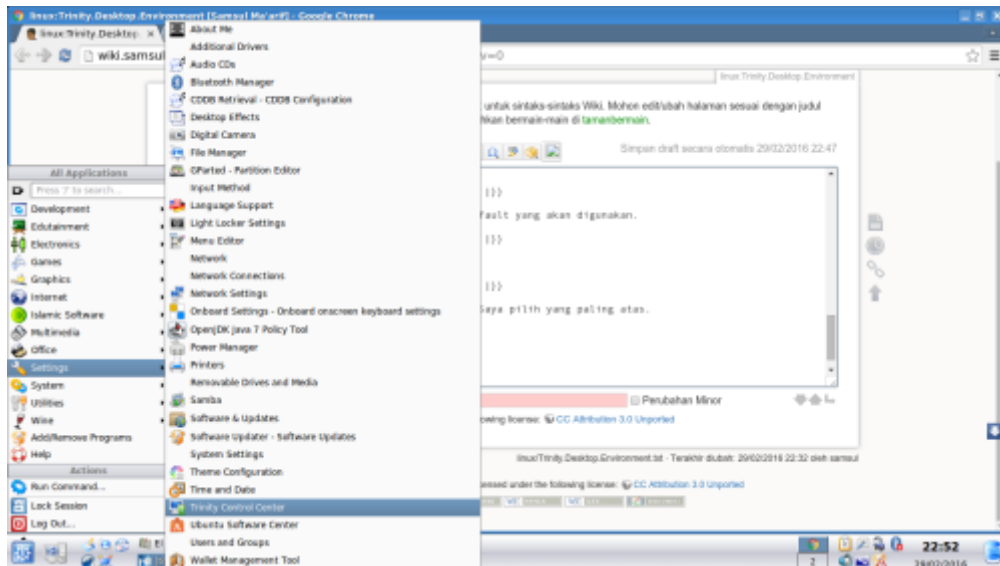

Keterangan sudah ditampilkan di layar sebelumnya. Saya pilih yang paling atas.

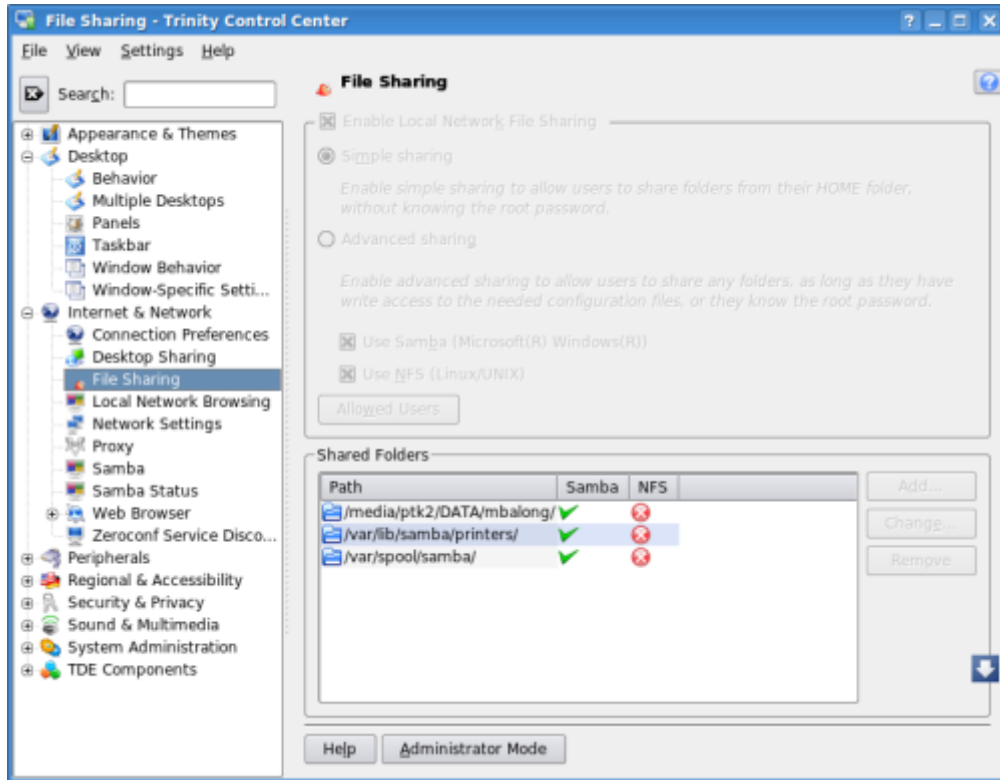

Screenshot

Ketika pertama kali masuk, akan dijalankan kpersonalizer namun sayangnya saya gak bisa ambil screenshot :(:(:(

Ini penampakan desktopnya :
